# Introduction

Eaton's Vickers® PVH high flow, high performance pumps are a family of variable displacement, inline piston units that incorporate the proven design, quality manufacturing techniques and operating features of other Vickers piston pumps, but in a smaller, lighter package.

The PVH series has been specially designed to meet the 250 bar (3625 psi) continuous duty performance requirements of new generation equipment designs.

These are efficient, reliable pumps, with a selection of optional controls for maximum operational flexibility. Designed specifically for strenuous application, they provide the productivity gains and controllability improvements desired in earth-moving, construction, machine tool, plastics, and all other energy-conscious markets. As with all Eaton products, these pumps have been fully laboratory tested and field proven.

## PVH Series Benefits

- Versatile design includes single pumps, thru-drive arrangements, and a variety of drive shaft and control options that will adapt to any application and provide the most cost effective installation.
- Proven components designed into a heavy duty, compact housing to provide 250 bar (3625 psi) continuous operating performance, and 280 bar (4050 psi) operating performance in a load sensing system. This design assures long life at the higher performance levels required of today's power-dense machinery.
- Compact and lightweight design to reduce the application weight, and provide better access for installation and servicing.
- Service kits developed for the most critical rotating and control components to simplify and assure successful pump servicing.
- Quiet designs available for noise-sensitive industrial applications, reducing sound levels further to provide a more acceptable environment.
- Designed for maximum efficiency in any type of application. A variety of compensators provide the most effective system control, and the 95%-plus volumetric efficiency means more flow, and more input energy, is directed to the work and not into heat and waste.
- Heavy duty bearings and shafts result in minimum internal deflections and wear, providing for longer life and maximum uptime.

# Hydraulic System Design Calculations

## Basic Formulas

### Output Flow (Q)

$$\text{lpm} = \frac{\text{cm}^3/\text{r} \times \text{rpm}}{1000} \quad \text{gpm} = \frac{\text{in}^3/\text{r} \times \text{rpm}}{231}$$

### Input Power (P)

$$\text{kW} = \frac{\text{l/min} \times \text{bar}}{600} \quad \text{hp} = \frac{\text{gpm} \times \text{psi}}{1714}$$

### Shaft Torque (M)

$$\text{N-m} = \frac{\text{bar} \times \text{cm}^3/\text{r}}{62.8} \quad \text{lb-in} = \frac{\text{psi} \times \text{in}^3/\text{r}}{6.28}$$

### Shaft Speed (n)

$$\text{rpm} = \frac{1000 \times \text{l/min}}{\text{cm}^3/\text{r}} \quad \text{RPM} = \frac{231 \times \text{gpm}}{\text{in}^3/\text{r}}$$

### Output Power (P)

$$\text{kW} = \frac{\text{N-m} \times \text{RPM}}{9549} \quad \text{hp} = \frac{\text{lb-in} \times \text{rpm}}{63,025}$$

### Volumetric Displacement

$$\text{cm}^3/\text{r} = \frac{\text{lpm} \times 1000}{\text{rpm}} \quad \text{in}^3/\text{r} = \frac{\text{gpm} \times 231}{\text{rpm}}$$

## Basic Formulas

bar = 10 Newtons/cm<sup>2</sup>  
 gpm = gallons per minute  
 hp = horsepower  
 lb-in = pound inch  
 lb-ft = pound feet  
 kW = kilowatt  
 kgf = kilograms force  
 l/min = liters per minute  
 N-m = Newton meters  
 psi = pounds per square inch  
 rpm = revolutions per minute

## Efficiencies

$$\text{Volumetric } N_v = \frac{\text{gpm actual}}{\text{gpm theoretical}}$$

$$\text{Mechanical } N_m = \frac{\text{lb-in actual}}{\text{lb-in theoretical}}$$

$$\text{Total } N_t = N_v \times N_m$$

## Commonly Used Conversions

To Convert	Into	Multiply by
bar	psi	14.5

## PVH Piston Pump

### 1, 2, 3 Pump Series

**PVH** – PVH OC Piston Pump

### 4, 5, 6 Displacement

- 057** – 57.4 cm<sup>3</sup>/r [3.50 in<sup>3</sup>/r]
- 063** – 63.1 cm<sup>3</sup>/r [3.85 in<sup>3</sup>/r]
- 074** – 73.7 cm<sup>3</sup>/r [4.50 in<sup>3</sup>/r]
- 081** – 81.0 cm<sup>3</sup>/r [4.94 in<sup>3</sup>/r]
- 098** – 98.3 cm<sup>3</sup>/r [6.00 in<sup>3</sup>/r]
- 106** – 106.5 cm<sup>3</sup>/r [6.50 in<sup>3</sup>/r]
- 131** – 131.1 cm<sup>3</sup>/r [8.00 in<sup>3</sup>/r]
- 141** – 141.0 cm<sup>3</sup>/r [8.60 in<sup>3</sup>/r]

### 7 Rotation

- R** – Right-Hand Rotation (cw)
- L** – Left-Hand Rotation (ccw)

### 8, 9 Front Mounting and Input Shaft

- 01** – 4 Bolt C, 1-1/4 inch Dia. Keyed
- 02** – 4 Bolt C, 14T 12/24 DP Splined
- 03** – 4 Bolt C, 17T 12/24 DP Splined
- 04** – 4 Bolt C, 1-1/2 inch Tapered Shaft & Woodruff Keyway
- 05** – 4 Bolt C, 1-1/4 inch Dia. Tapered Keyed & 3/4-16 UNF-2A Ext Thread
- 08** – 2 Bolt B, 15T 16/32 DP Splined
- 0N** – 4 Bolt M (ISO 125B4HW) with 32.1 (1.26) Dia Straight Keyed
- 10** – 4 Bolt C, 14T 12/24 DP Splined, 73.2 (2.88) Shaft Ext and 49.0 (1.93) Spline
- 13** – 4 Bolt C, 1-1/2 inch Dia Straight Keyed
- 16** – 4 Bolt C, 44.4 (1.75) Dia Straight Keyed
- 17** – 4 Bolt C, 1-1/4 in Dia Tapered Keyed & M20 x 1-1/2 in. Ext Thread

- 23** – 2 Bolt C, 17T 12/24 DP Splined Shaft
- 24** – 2 Bolt B 19T 24/48 DP Splined
- 30** – 4 Bolt C, 14T 12/24 DP Splined, 78.0 (3.07) Shaft Extension and 54.0 (2.12) Spline Length
- 51** – 2/4 Bolt C, 1-1/4 inch Dia Straight Keyed
- 52** – 2/4 Bolt C, 14T 12/24 DP Splined
- 53** – 2/4 Bolt C, 17T 12/24 DP Splined
- 58** – 2 Bolt B, 15T 16/32 DP Splined
- 60** – 2/4 Bolt C, 14T 12/24 DP Splined, 73.2 (2.88) Shaft Extension and 49.0 (1.93) Spline Length
- 62** – 2 Bolt C, 13T 8/16 DP Splined

### 10, 11 Main Ports Size & Location

- AA** – Side Ports; Suction 2 in. (Code 61) Pressure 1 in. (Code 61)
- AB** – Side Ports; Suction 2 in. (Code 61) - w/ M12 Threads; Pressure 1 in. (Code 61) - w/ M10 Threads
- AC** – Side Ports; Suction 2 in. (Code 61) - w/ M12 Threads; Pressure 1.25 in. (Code 61) - w/ M12 Threads
- AD** – Side Ports; Suction 2.5 in. (Code 61) w/ M12 Threads; Pressure 1 in. (Code 61) w/ M10 Threads

- AE** – Side Ports; Suction 2.5 (Code 61) w/ M12 Threads; Pressure 1.25 (Code 61) w/ M12 Threads
- AF** – Side Ports; Suction 2.5 in. (Code 61) ; Pressure - 1.25 in. (Code 62)
- AG** – Side Ports; Suction - 2.5 in. (Code 61) w/ M12 Threads; Pressure - 1.25 in. (Code 62) w/ M14 Threads
- AH** – Side Ports; Suction - 2.0 in. (Code 61) w/ M12 Threads; Pressure - 1.0 in. (Code 61) w/ M12 Threads
- AJ** – Side Ports; Suction 2.5 in. (Code 61); Pressure 1.0 in. (Code 61)
- AL** – Side Ports; Suction - 2.5 in. (Code 61); Pressure - 1.25 in. (Code 61)

### 12 Drain Ports Size & Location

- 1** – #8 SAE O-Ring Port - Bottom (Top Plugged)
- 2** – #8 SAE O-Ring Port - Top (Bottom Plugged)
- 3** – #10 SAE O-Ring Port - Bottom (Top Plugged)
- 4** – #10 O-Ring Port - Top (Bottom Plugged)
- 5** – #8 3/4-16 UNF-2B SAE O-Ring Port - Bottom (Top Plugged)
- 6** – #8 3/4-16 UNF-2B SAE O-Ring Port - Top (Bottom Plugged)
- 7** – #10 7/8-14 UNF-2B SAE O-Ring Port - Bottom (Top Plugged)
- 8** – #10 7/8-14 UNF-2B SAE O-Ring Port - Top (Bottom Plugged)

- 9** – #12 SAE O-Ring Port - Bottom (Top Plugged)
- A** – #12 SAE O-Ring Port - Top (Bottom Plugged)
- B** – M22 x 1.5 Metric O-Ring - Bottom (Top Plugged)
- C** – M22 X 1.5 Metric O-Ring - Top (Bottom Plugged)
- F** – Vertical Mount w/ G 1/2 BSPP - Bottom (Top Plugged)
- G** – Vertical Mount w/ G 1/2 BSPP - Top (Bottom Plugged)

### 13 Diagnostic Pressure Ports

- 0** – No Diagnostic Pressure Ports

### 14 Controller Type\*

- A** – Pressure Compensator
- B** – Pressure And Flow Compensator
- D** – Pressure Compensator w/ Torque Sensing
- E** – Pressure And Flow Compensator w/ Torque Sensing
- G** – IC Pressure Compensator
- H** – IC Pressure and Flow Compensator
- J** – IC Pressure and Flow Compensator w/ Torque Sensing
- N** – Pressure and Flow Compensator w/ Unload Valve

*\* Torque control is not available with case-to-inlet check valve. Specify "AA" Pump Special Features*

# Model Codes

## PVH Piston Pump

### **15,16 Pressure Comp. Setting**

- 07** – 66-74 bar [957-1073 psi]
- 23** – 226-234 bar [3278-3394 psi]
- 25** – 246-254 bar [3568-3684 psi]

*Other Settings Available by Request*

### **17,18 Flow Compensator Setting**

- 00** – No Flow Comp. Setting
- 14** – 13-15 bar [189-218 psi]
- 24** – 23-25 bar [334-363 psi]
- AA** – Unload Valve Standby 39-41 bar [334-363 psi]

*Other Settings Available by Request*

### **19,20 Torque Setting/ Other Comp.**

- 00** – None
- 04** – 36-44 bar [522-638 psi]
- 14** – 136-144 bar [1973-2089 psi]
- AA** – Unload Valve 186.2-193 bar [2700-2800 psi]  
Reset 157.8-164.6 bar [2288-2387 psi]
- AB** – Unload Valve 203.4-210.2 bar [2950-3050 psi]  
Reset 183-190 bar [2650-2748 psi]

### **21,22 Control Special Features**

- AB\*\*** – No Control Special Features
- AA** – Bleed Down Orifice 0.37 [.015] Ø
- AR** – Bleed Down Orifice 0.65 [.026] Ø
- AV** – 1.60 [.063] Ø Orifice (IC Control Only)
- AW** – 0.76 [.030] Ø Orifice (IC Control Only)

### **23 Maximum Displacement Option**

- 1** – Standard Displacement (As given in code title)
- 2** – Adjustable Max Displacement (Set at Max)
- F** – Adjustable Max Displacement (Set at Max) w/ Extended Adjusting Screw

*Other Settings Available by Request.*

### **24,25 Auxiliary (Rear) Mount and Output Shaft**

- 00** – No Auxiliary Mounting Features
- AA** – 2/4 Bolt C, 14T 12/24DP
- AB** – 2/4 Bolt B, 15T 16/32DP
- AC** – 2 Bolt A, 9T
- AY** – 2/4 Bolt B, 13T 16/32DP
- AZ** – 2/4 Bolt C, 17T 12/24DP
- BA** – 2 Bolt A, 11T 16/32DP

### **26 Shaft Seal**

- 1** – Single, OneWay Shaft Seal, Viton®
- 3** – Single, OneWay Shaft Seal, Nitrile
- 5** – Double, TwoWay Shaft Seal, Viton® W/VHO Filter
- 6** – Double, TwoWay Shaft Seal, Nitrile W/VHO Filter

### **27,28 Pump Special Features**

- 00** – No Pump Special Features
- AA** – No Case To Inlet Check
- AE** – Q250 Valve Plate, No Case To Inlet Check Valve
- AF** – Q140 Valve Plate, No Case To Inlet Check Valve
- AP** – Pressure Lube Swashplate
- AR** – Pressure Lube Swashplate, No Case To Inlet Check Valve
- SC** – Q250 Valve Plate, Grooved Saddle Bearings, No Case To Inlet Check Valve
- BH** – Q250 Valve Plate, Pressure Lube Swashplate
- BM** – Q250 Valve Plate, Pressure Lube Swashplate, No Case To Inlet Check Valve
- BR** – Q140 Valve Plate, Grooved Saddle Bearings, No Case To Inlet Check Valve

### **29,30 Paint**

- 00** – No Paint
- 01** – Blue Primer

### **31 Identification**

- 0** – Standard

### **32 Design Code**

- A** – First Design

# Performance Data

Performance data is typical with SAE 10W anti-wear hydraulic oil at 50°C (120°F) and at zero pump inlet pressure, except where otherwise indicated.

## Rated Characteristics of PVH Industrial Pumps\*

Parameters	PVH057	PVH063	PVH074	PVH081	PVH098	PVH106	PVH131	PVH141
Geometric displacement, max. cm <sup>3</sup> /r (in <sup>3</sup> /r)	57,4 (3.5)	63,1 (3.85)	73,7 (4.5)	81,0 (4.94)	98,3 (6.0)	106,5 (6.50)	131,1 (8.0)	141,1 (8.60)
Rated pressure bar (psi)	250 (3625)†	230 (3300)†	250 (3625)†	230 (3300)†	250 (3625)†	230 (3300)†	250 (3625)†	230 (3300)†
Rated speeds in r/min at various inlet pressures								
127 mm Hg (5" Hg)	1500	1500	1500	1500	1500	1500	1200	1200
Zero inlet pressure	1800	1800	1800	1800	1800	1800	1500	1500
0,48 bar (7 psi)	1800	1800	1800	1800	1800	1800	1800	1800
Typical effective flow in l/min (USgpm) at 1500 r/min	83	102 (22)	140 (27)	186 (37)	186 (37)		(49)	
at 1800 r/min		98 (26)	125 (33)	170 (45)	170 (45)		223 (59)	

† In load sensing systems the compensator can be set at 280 bar (4060 psi).

\* Industrial Valve Plates are specified in Pump Special Feature 'Q250' or 'Q140'

## Rated Characteristics of PVH Industrial Pumps with Alternate Fluids

Parameters	Petroleum based	Polyol ester	Water glycol	HWBF(90-10) thickened
Max. pressure bar (psi)	250 (3625)	230 (3300)	172 (2500)	155 (2250)
Max. speed in r/min at:				
1,0 bar abs. (0 psi)	1800 ‡	1800	1800	1700
0,85 bar abs. (5" Hg)	1500 □	1500	1500	1500
Max. inlet temp. deg. C (deg. F)	93 (200)	65 (150)	50 (120)	50 (120)

‡ 1500 rpm for PVH131/141 only. □ 1200 rpm for PVH131/141 only.

## Rated Characteristics of PVH Mobile Pumps ◊

Parameters	PVH057	PVH063	PVH074	PVH081	PVH098	PVH106	PVH131	PVH141
Rated speeds in r/min at various inlet pressures								
127 mm Hg (5" Hg)	2000	2000	1850	1850	1750	1750	1650	1500
Zero inlet pressure	2400	2400	2200	2200	2100	2100	2000	2000
0,48 bar (7 psi)	3000	3000	2750	2750	2600	2600	2500	2500
Typical effective flow in l/min (USgpm) at 250 bar (3625 psi) and rated speed @ zero inlet pressure	134 (35)	146 (38)	156 (41)	172 (45)	202 (53)	216 (57)	249 (66)	272 (72)

◊ Displacements & rated pressure are same as for PVH\*\*\* industrial pumps.

† Based on 6900 bar/sec (100,000 psi/sec) pressure rise at rated speed and pressure.

## Sound Levels

Vickers PVH pumps are designed to provide the highest levels of system performance with noise levels within OSHA requirements. The standard models exhibit low sound levels across a wide range of operating speeds and pressures to accommodate the conditions necessary for high performance mobile vehicles. In addition, the quieter QI models provide even lower sound levels at typical in-plant conditions.

Sound is generated by a variety of factors associated with the system, machine, and environment. For more information concerning the causes and nature of noise in machinery, and methods to reduce sound levels, refer to Eaton's "More Sound Advice" bulletin 390 and "Noise Control in Hydraulic Systems" bulletin 510.

‡ DIN: Computed semi-anechoic values per DIN 45635. NFPA: Recorded in a semi-anechoic chamber in accordance with NFPA Recommended Standard 13.9.70.12. All values shown are the higher of either maximum displacement or fully compensated conditions.

\* Q250 Valve Plate

Due to the rounding of numbers during conversion, the difference between DIN and NFPA ratings may be one or two numbers; for example 69 (71) or 69 (72).

# Control Options

## Pressure Compensator Control (A)

The pump will provide a continuously modulated flow to meet changing load demands at a pre-adjusted compensator pressure. At pressures below the compensator setting, the pump will operate at maximum displacement. The compensator is available in two pressure ranges.

## Load Sensing and Pressure Compensator Control (B)

The pump will provide power matching of pump output to system load demand, maximizing efficiency and improving load metering characteristics of any directional control valve installed between the pump and the load.

Load sensing ensures that the pump always provides only the amount of flow needed by the load. At the same time, the pump operating pressure adjusts to the actual load pressure plus a pressure differential required for the control action. When the system is not demanding power, the load sense control will operate in an energy-saving stand-by mode.

Typically, the differential pressure is that between the pressure inlet and service port of a proportionally controlled directional valve, or a load sensing directional control valve. The standard differential pressure setting for load sense is 20 bar (290 psi), but can be adjusted to between 17 and 30 bar (247 and 435 psi) on the pump.

If the load pressure exceeds the system pressure setting, the pressure compensator de-strokes the pump. The load sensing line must be as short as possible and can also be used

for remote control or unloading of the pump pressure. For remote control purposes, it is recommended that you contact your Vickers representative for the correct configuration of the control.

# Control Options

## Pressure and Flow Compensator with Unloading Valve for Accumulator Circuit

This pump control functions as a load-sensing pressure compensator that unloads the pump at a preset pressure and loads the pump after preset pressure drop.

### Unloading Valve Circuit (N)

## Pressure and Torque Limiter Control (D)

The pump senses pressure and flow and starts destroking at a predetermined input torque level. The rate of flow reduction is normally tailored to follow the maximum power capability curve of the prime mover. Input torque is limited while the pressure compensator limits the system pressure.

When the input speed remains constant (i.e. industrial drives), the torque limiter acts as an input power limiter. This allows a smaller electric motor to be used if maximum pressure and maximum flow are not required at the same time. At low load levels, the control permits high pump displacement and high load speeds. Under heavy loads, speed is reduced, preventing stalling of the prime mover. In the case of variable speed drives (I.C. engines), this function provides, in addition to pressure compensation or limiting, a torque limiting ability that can be adjusted to the torque/speed characteristics of the engine.

The start of torque limiting (pump-destroking) is pressure dependent. This pressure is selectable (see model code) and is factory preset to between 30% and 80% of the maximum pressure control setting. The minimum torque pressure setting is 40 bar (580 psi).

### Summation Control (C)

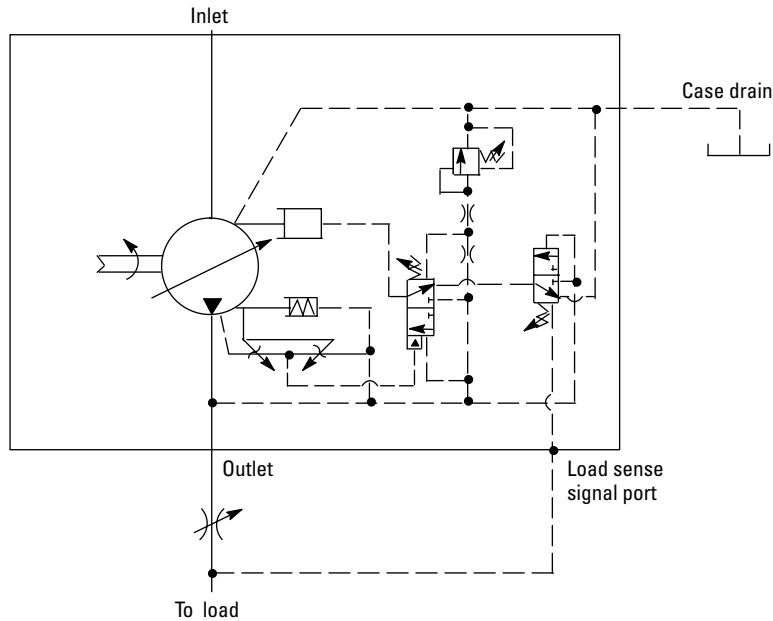

# Control Options

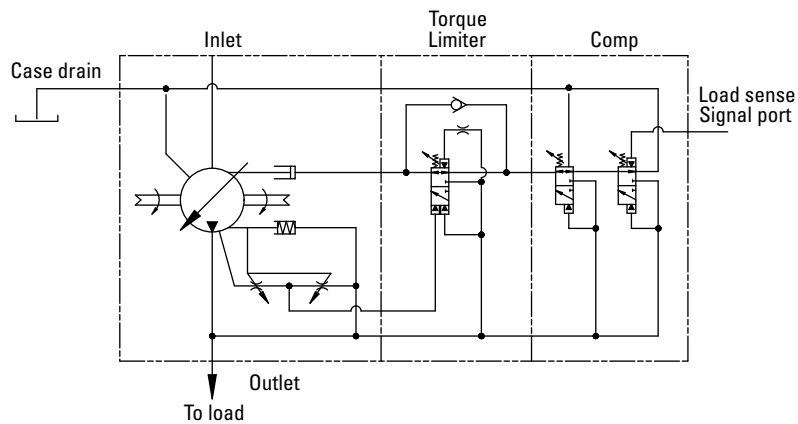

## Pressure and Torque Limiting, Plus Load Sensing, Control (E)

The pump's control functions like a load sensing control, but with additional torque limiting tailored to the size of the drive motor selected. The limiting function is the same as for a pressure compensator with torque limiting (see D description, previous page). The combination of the two controls provides the following benefits:

1. The energy savings of a variable displacement load sensing control.
2. The pump pressure follows the load pressure.
3. The torque control allows smaller drive motors to be used.
4. The pressure compensator de-strokes the pump as maximum pressure is reached.
5. The pump pressure can also be remotely controlled using the load sense line. The E control allows complete control of flow and pressure, either mechanically or electrically, if used with proportional valves.

## Sumation Control (F)

# Control Options

## Industrial Control Compensator

This pump is intended for use when multiple, remote, or electrically controlled compensating settings, with or without load sensing or, with or without torque control are desired.

Pressure compensation is obtained when an internal plug is removed, the load-sense signal port is kept plugged, and internal pilot pressure is applied to the spring chamber of the control spool. For pressure compensation with load sensing, the internal plug stays, the load-sense signal port is unplugged, and pilot pressure is externally applied.

An external relief valve (not supplied) controls spring chamber pressure. The externally adjustable spring determines the differential pressure setting of the control. Outlet pressure is limited to the value of the spring chamber (pressure port) pressure, plus control differential pressure.

(continued on next page)

## Pressure Compensating Without Load Sensing (G)

# Control Options

## Industrial Control Compensator

(continued)

Spring chamber (pilot) pressure is separated from outlet pressure by an internal orifice. Outlet pressure shifts the spool when pressure drop across the orifice reaches the differential pressure setting, and the pump de-strokes.

The relief valve can be mounted to an NFPA-D03/ISO 4401-03 pad on the pump control, or remotely located via tapping and blanking plates installed on the pad. See "Ordering Procedure," page 35, for more on valves and plates.

The standard factory-set differential pressure setting of the pump control is 20 bar (290 psi) and is not specified in the pump model number. Any other ordered differential pressure, within the control's adjustable pressure range of 17–35 bar (247–508 psi), will be specified in the model number.

## Pressure Compensating with Load Sensing (H)

## Pressure Compensating with Load Sensing and Torque Control (J)

# Input Shaft Selection Data

Multiple pump arrangements can be formed by a PVH thru-drive pump and any suitable pump (single or multiple) that can be installed on the SAE "A," "B," or "C" rear-mounting option available for the thru-drive pump.

It is important to check that maximum torque values for individual pump sections, or complete pumps, occurring in a specific application will not exceed the limits tabled below.

Shaft Code	Shaft Designation	Basic Pump Series	Thru-drive Pump Series	Maximum Input Torque Nm (lb. in.)	Maximum Thru-drive Output Torque Nm (lb. in.)
N	ISO 3019/2 – E32N short straight keyed	PVH057/063	–	450 (3,980)	–
		PVH074/081	–	450 (3,980)	–

## Pump with IC Compensator (Remotely Controllable Pressure Compensator, and Optional Load Sensing)

### Pressure compensator:

Remove access plug, using 1/8 inch hex wrench. Remove internal plug, using 5/32 inch hex wrench. Replace access plug and torque to 12,1–12,4 Nm (107–110 lb. in.). Attach relief valve hardware (not supplied) to control surface. See page 15 for more details.

### Pressure compensator with load sensing:

Remove load-sense port plug. (Internal plug must remain in place.) Attach line to load-sense port. Pressure decay rate of this line must not exceed 11 kbar/second (160 kpsi/second). Attach relief valve hardware (not supplied) to control surface. See page 15 for more details.

## Pump with Adjustable Maximum Volume Stop

This option allows maximum pump delivery to be externally adjusted from 100 percent down to 25 percent. To assist initial priming, adjust stop to allow at least 40 percent of maximum delivery. Adjust by loosening locknut and turning adjusting rod clockwise to decrease maximum delivery, or counter-clockwise to increase maximum delivery. When desired setting is obtained, torque locknut to 25-50 Nm (18-36 lb. ft.).

## Thru-drive Flange Kit and Shaft Coupling

Front Pump Model Series	SAE (J744) Mounting Flange for Rear Pump	Mounting Flange Adapter Kit Number*		Coupling Part Number**
		Metric Threads	Inch Threads	
PVH057	A (J744-82-2)	None required	None required	526682
PVH063	B (J744-101-2/4)	876394	876390	526694
	BB (J744-101-2/4)	876394	876390	526695
	C (J744-127-2/4)	876392	876389	526696
PVH074	A (J744-82-2)	None required	None required	864460
PVH081	B (J744-101-2/4)	876394	876390	864457
	BB (J744-101-2/4)	876394	876390	864459
	C (J744-127-2/4)	876392	876389	864458
	CC (J744-127-2/4)	876392	876389	864461
PVH098	A (J744-82-2)	None required	None required	877039
PVH106	B (J744-101-2/4)	876394	876390	877040
PVH131	BB (J744-101-2/4)	876394	876390	877044
PVH141	C (J744-127-2/4)	876392	876389	877045
	CC (J744-127-2/4)	876392	876389	877046

\*The basic PVH thru-drive pump has an SAE "A" pad on the rear. An SAE "B" or "C" pad rear mounting requires flange adapters. Required adapters can be provided if specified in the pump model code. The best combination of price, availability and flexibility is achieved by ordering a PVH SAE "A" thru-drive model and the applicable PVH mounting flange adapter separately. For example, a PVH074C-RCF-3S-10-C25-31 may also be ordered as a PVH074C-RAF-3S-10-C25-31 and a 876389 flange adapter.

\*\* Thru-drive shaft couplings must be ordered separately to drive the second pump.

## Typical Rear Pumps for Thru-drive Assemblies

Mounting	Piston pump Series	Shaft Code	Vane pump Series	Shaft Code
SAE A	PVQ10/13	3	V10	11
			V20	62
SAE B	PVQ20/32	3	20V	151
	PVQ40/45	3	25V	11
	PVE19/21	9	V2020	11
SAE BB	PVE19/21	2		
	TA19	2		
SAE C	PVH057/063	2	35V	11
	PVH074/081	2	352*V	11
	PVH098/106	2		
SAE CC	PVH131/141	3		

NOTE: The above Vickers pumps are examples of rear pumps for the thru-drive pumps dimensioned on pages 25 and 26. The thru-drive torque limits identified in the chart on page 16 must not be exceeded when applying these multiple pump systems.

# Installation Dimensions

## ISO 3019/2-125B4HW Mounting Flange for PVH057 and PVH074 Pumps

## SAE 2-bolt/4-bolt Mounting ("027" Option) for PVH057, PVH074 and PVH098 Pumps

## Cover ("031" Option) for Thru-drive SAE "A" Rear Mounting Flange

Note: When cover (part number 939790) is ordered as a separate part, two screws (part number 170177) are required to attach the cover to the pump's rear mounting flange.

The O-ring for sealing the rear mounting flange is furnished with each thru-drive pump.

# Installation Dimensions

## Pumps for Shaft-up Operation (Vertical Mount, "057" Option)

Model	Dim. "A"
PVH057	25,68/24,94
PVH063	(1.01/0.98)
PVH074	26,64/25,90
PVH081	(1.05/1.02)
PVH098	25,82/25,08
PVH106	(1.02/0.99)
PVH131	25,12/24,38
PVH141	(.99/0.96)

## Model FB-C4-10 Foot Mounting Kit for All PVH Pumps

Each kit (part no. 02-143419) includes bracket shown and four screws for mounting to the pump. Kits are not included with pumps and must be ordered separately by model number.

# Application Data

## Hydraulic Fluids and Temperature Ranges

Use anti-wear hydraulic oil, or automotive type crankcase oil (designations SC, SD, SE or SF) per SAE J183 FEB80.

Select a viscosity grade that will allow optimum viscosity, between 40 cSt (180 SUS) and 16cSt (80 SUS), to be achieved.

Cold start capability at 5000 cSt. Max. intermittent temp. 104° C (220° F).

For further information, see 694.

## Fluid Cleanliness

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Essential information on the correct methods for treating hydraulic fluid is included in Eaton publication 561; "Vickers Guide to Systemic Contamination Control," available from your local Eaton distributor or by contacting Eaton. Recommendations on filtration and the selection of products to control fluid condition are included in 561.

Recommended cleanliness levels, using petroleum oil under common conditions, are based on the highest fluid pressure levels in the system and are coded in the chart below. Fluids other than petroleum, severe service cycles or temperature extremes are cause for adjustment of these cleanliness codes. See Eaton publication 561 for exact details.

Eaton products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend

levels above those specified. Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed below. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

## Drive Data

Mounting attitude should be horizontal. See preceding page for vertical mount option. Consult your local Vickers representative if a different arrangement is required.

Direction of shaft rotation, viewed at the prime mover end, must be as indicated in the model designation on the pump. See "5" in Model Codes, page 6.

Drive arrangement should be by direct drive through a flexible coupling. Check pump installation drawing for concentricity and squareness tolerances.

Torque capability of shafts in basic (non-thru-drive) pumps is well in excess of that needed for operation at rated pressure and maximum displacement. Limitations for multiple pumps formed by PVH thru-drives as front-end sections are specified in the chart on page 18.

## Moment of Inertia (Single Pump Rotating Group)

Model	Nm.sec <sup>2</sup>	(lb.in.sec <sup>2</sup> )
PVH057	0,0054	(0.0475)
PVH063	0,0054	(0.0447)
PVH074	0,0078	(0.0692)
PVH081	0,0073	(0.0643)
PVH098	0,0134	(0.1189)
PVH106	0,0123	(0.1086)
PVH131	0,0210	(0.1862)
PVH141	0,0210	(0.1856)

## Cleanliness Codes For Petroleum Oil Usage

Product	System Pressure Level		
	2000 psi	2000-3000 psi	3000+ psi
Vane pumps, fixed	20/18/15	19/17/14	18/16/13
Vane pumps, variable	18/16/14	17/15/13	
Piston pumps, fixed	19/17/15	18/16/14	17/15/13
Piston pumps, variable	18/16/14	17/15/13	16/14/12
Directional valves	20/18/15	20/18/15	19/17/14
Proportional valves	17/15/12	17/15/12	15/13/11
Servo valves	16/14/11	16/14/11	15/13/10
Pressure/Flow controls	19/17/14	19/17/14	19/17/14
Cylinders	20/18/15	20/18/15	20/18/15
Vane motors	20/18/15	19/17/14	18/16/13
Axial piston motors	19/17/14	18/16/13	17/15/12
Radial piston motors	20/18/14	19/17/13	18/16/13

# Weights, Ordering, Installation/Start-up

## Weights in kg (lb)\*

Pump Size	Basic Pump	Thru-drive Pump SAE "A"
PVH057	30-36	31-37
PVH063	(66-79)	(68-82)
PVH074	39-45	42-48
PVH081	(86-99)	(93-106)
PVH098	43-49	44-50
PVH106	(95-108)	(97-110)
PVH131	60-66	62-68
PVH141	(132-145)	(137-150)

\*Approximate dry weights. Weight for a given model depends upon the type of pump control selected.

## Ordering Procedure

Order PVH pumps by the full model designation. Pump displacement, mounting flange type, direction of rotation, pump configuration, shaft end type, shaft seals, pressure adjustment range, specific control functions, and torque limiter settings are all specified in the full model code.

Various Vickers® relief valves from Eaton are suitable for use with the "IC" compensator and must be ordered separately.

Examples include:

- DGMC2-3-AT-BT (plus DG4V-3-8C directional valve) for remotely and electrically controlled dual-pressure compensation, and standby no-flow pump operation in the load sensing mode.
- DGMC-3-PT-FW-30 crossline relief module (with DG4V3-8C directional valve) for electrical selection of dual pressure compensation.
- ECGF-02-9-21 proportional relief valve, with feedback, for remote control of pressure compensation.
- ECG-02-9-30 proportional relief valve for remote control of pressure compensation.

- DGMC-3-AT-BT (plus DG4V-3-0A directional valve) for remotely and electrically selected dual-pressure compensation.
- C175-F-20 (plus blanking plate DGMA-3-B-11 and tapping plate DGMA-T2-20-S) for remote control of pressure compensation.
- CVGC-3-S12 for non-remote control of pressure compensation.
- DGMC-3-PT-FW-30 crossline relief module (with blanking plate DGMA-3-B-11) for non-remote control of pressure compensation.

Contact your Vickers representative for additional information on the application and ordering of relief valves.

## Installation and Start-up

The installation of PVH pumps must be in accord with the data on pages 16 and 27.

Before the pump is started, fill the case through the uppermost drain port with hydraulic fluid of the type to be used. The case drain line must be connected directly to the reservoir and terminate below the oil level.

If the pump has the vertical-mount option, attach a secondary drain line as noted on page 29.

Maximum continuous pressure at the case drain port must not exceed 0,5 bar (7 psi). For multiple pump arrangements that include non-PVH sections, the requirements of the non-PVH units must be considered.
